

Test Plug and Test Cap disclaimer

The former low torque test plug / cap fixture were designed to be made up with a power tong at a lower torque than normal torque values specified for coupling. It has never been approved by VAM with the combination of a PTFE ring.

Some permanent deformations have been reported with the usage of a low torque test plug / cap with a PTFE ring.

VAM cannot accept any liability for damage arising from the usage of a PTFE ring with the standard low torque test plug and test cap fixture.

In case of doubt or if you require more information please contact testfixture@vamservices.com
